

Kaiser Permanente Medicare Prescription Drug Plan (PDP)

2025 Prior Authorization Requirements

PLEASE READ:

Kaiser Permanente requires you to get prior authorization for certain drugs. This means that you will need to get approval from Kaiser Permanente before you fill your prescriptions. If you don't get approval, Kaiser Permanente may not cover the drug. The medications in this document have requirements that must be met for coverage to be considered. Beneficiaries must use network pharmacies to access their prescription drug benefit.

NOTE: Part D does not cover some indications that are excluded from coverage or restricted under section 1927(d)(2) of the Act (e.g., infertility, cosmetic purpose, or erectile dysfunction)

Other Criteria	Homozygous familial hypercholesterolemia: covered for patients age 10 or older with 1) positive genetic testing or untreated low-density lipoprotein cholesterol (LDL-C) levels of greater than 300 mg/dL with documentation of cutaneous or tendon xanthomas before age 10 or evidence of heterozygous familial hypercholesterolemia in both parents and, 2) treatment with maximally tolerated high-intensity statin therapy (i.e., atorvastatin 40 or 80 mg, rosuvastatin 20 or 40 mg) has been ineffective (LDL-C greater than 100 mg/dL) or contraindicated or not tolerated. Statin intolerance is defined as the inability to tolerate at least two statins, one at the lowest starting daily dose (e.g., rosuvastatin 5 mg, atorvastatin 10 mg, simvastatin 10 mg, lovastatin 20 mg, pravastatin 40 mg, fluvastatin 40 mg, and pitavastatin 2 mg) due to either objectionable symptoms or abnormal lab determinations, which are temporally related to statin treatment and reversible upon statin discontinuation, but reproducible by re-challenge with other potential causes being excluded. Primary hyperlipidemia including heterozygous familial hypercholesterolemia: covered for patients age 10 years of older with 1) a probable diagnosis of HeFH based on a validated diagnostic tool (Simon Broome, Dutch Lipid Clinic Network, MEDPED) and, 2) treatment with maximally tolerated high-intensity statin therapy has been ineffective (unable to achieve and maintain LDL-C below goal of less than 100 mg/dL) or contraindicated or not tolerated. Clinical ASCVD: covered for patients age 18 years or older with 1) clinical ASCVD (i.e., coronary heart
