

Corneal Collagen Cross-Linking For Progressive Keratoconus Medical Coverage Policy

UTILIZATION * ALERT*

- Prior to use of this MCP for evaluation of medical necessity, benefit coverage MUST be verified in the member's EOC or benefit document.
- For Medicare members, please refer to CMS guidelines through Medicare Coverage Database requirements.
- Medicare does not have a National Coverage Determination (NCD) for Corneal Collagen Crosslinking.
- Local Coverage Determinations (LCDs)/Local Coverage Articles (LCAs) do not exist at this time.
- Note: After searching the Medicare Coverage Database, if no NCD/LCD/LCA is found, then use the policy referenced above for coverage guidelines

I. **Procedure:** Corneal Collagen Cross-Linking for Progressive Keratoconus

II. **Coverage Policy**

- A. Covered for progressive keratoconus and keratectasia.
Epithelium-off photochemical collagen cross-linkage using riboflavin and ultraviolet A is considered medically necessary for progressive keratoconus and keratectasia.
- B. Photochemical collagen cross-linkage is considered experimental and investigational for all other indications because its effectiveness for other indications has not been established.
- C. **Epithelium-on** (transepithelial) collagen cross-linkage is considered experimental and investigational for keratoconus, keratectasia, and all other indications.
- D. Performance of photochemical collagen cross-linkage in combination with other procedures (CXL-plus) (e.g., intrastromal corneal ring segments, PRK or phakic intra-ocular lens implantation) is considered experimental and investigational.
