**CT Colonography (Virtual Colonoscopy)
for Virginia, Federal and District of Columbia (D.C.)
Jurisdictions
Medical Coverage Policy**

UTILIZATION * ALERT*

- Prior to use of this MCP for evaluation of medical necessity, benefit coverage **MUST** be verified in the member's EOC or benefit document.
- For Medicare members, please refer to the Medicare Coverage Database.
- Note: After searching the Medicare Coverage Database, if no NCD/LCD/LCA is found, then use the policy referenced above for coverage guidelines

I. Procedure: CT Colonography (Virtual Colonoscopy)

II. Diagnoses: Screening for Colorectal Disease

III. Specialties: Gastroenterology, Radiology

IV. Clinical indications for referral

Kaiser Permanente Mid-Atlantic States (KPMAS) considers CT colonography (CTC) medically necessary for any of the following:

- A. Colonic evaluation of symptomatic members with a known partial (not complete) colonic obstruction or stenosis ordered by a GI specialist or after discussion with and approval by Gastroenterology or General Surgery. This procedure should be deemed necessary for the gathering of information and the benefit exceeds the risks of this procedure.
- B. Colonic evaluation of members who have failed colonoscopy or undergone an incomplete colonoscopy due to partial obstructive or stenotic colonic lesions. Or members who have failed colonoscopy or undergone an incomplete colonoscopy due to technical reasons and are felt to be candidates for virtual colonoscopy to achieve full colonic visualization. These cases will require order by GI specialist or approval by Gastroenterology or General Surgery service chief and it must be found that this procedure is deemed necessary for the gathering of information and the benefit exceeds the risks of this procedure.
- C. When criteria for conventional colonoscopy have been met and conventional colonoscopy is medically contraindicated (i.e., prophylactic anticoagulation which cannot be stopped, contraindications to sedation).

V. Cautions and Exclusions

- A. For the CTC virtual colonoscopy, all patients should be informed of radiation exposure for this procedure and long-term cumulative effects of radiation exposure.
- B. KPMAS considers the use of CTC in all other situations to be experimental and investigational

- at this time.
- C. Virtual colonoscopy using magnetic resonance imaging (MRI) (also known as MRI colonography) is considered experimental and investigational for the screening or diagnosis of colorectal cancer, diverticulitis, inflammatory bowel disease, or other indications because its value for these indications has not been established.
