

Visco-Supplementation (Hyaluronic Acid Intra-Articular Injection) Medical Coverage Policy

Utilization *ALERT*

- Prior to use of this MCP for evaluation of medical necessity, benefit coverage **MUST** be verified in the member's EOC or benefit document.
- For Medicare members, please refer to CMS guidelines through Medicare Coverage Database requirements.
- Note: After searching the Medicare Coverage Database, if no NCD/LCD/LCA is found, then use the policy referenced above for coverage guidelines

I. Procedure: **Visco supplementation (Hyaluronic Acid Intra-Articular Injection)**

II. **Specialty:** Orthopedic surgery, Sports Medicine

III. **Definition**

Visco supplementation or Visco-supplementation is a procedure where a substance called hyaluronan is injected into the joint.

Hyaluronan (also called hyaluronate or hyaluronic acid) is a gel-like substance, used in Visco supplementation with the objective to improve the lubricating properties of the synovial fluid, provide comfort and pain-relief from osteoarthritis, and improve activity and mobility.

IV. **Clinical Indication and Exclusion**

A. **Clinical Indications**

1. Have mild to moderate knee osteoarthritis; and
2. Have allergies or contraindications to standard treatment options (such as analgesics, non-steroidal anti-inflammatory drug (NSAID's), or cortisone; or
3. Failed to improve with NSAIDS; or
4. Failed at least 2 corticosteroid injections (CSI); and
5. There has been no orthopedic knee surgery in the prior 6 months and no plans for surgery in the next 6 months; and
6. No viscosupplementation within the past 6 months; and
7. At least 8 weeks have passed since the most recent CSI; and

**Visco-Supplementation
(Hyaluronic Acid Intra-Articular Injection)**

Medical Coverage Policy

8. Hyaluronic acid intra-articular injection is *not* medically necessary for any other indications except for the conditions listed in section IV, A-1-7

B. Exclusion

Visco supplementation is considered experimental and investigational as evidence of its' efficacy is inconclusive and not established for the following conditions. The list is not exhaustive.

1. Rheumatoid arthritis of the knee;
2. Osteoarthritis of the knee other than above;
3. Osteoarthritis of the hip;
4. Osteoarthritis of the first metatarsophalangeal joint;
5. Osteoarthritis of the shoulder
6. Osteoarthritis of the ankle;
7. Acute sprain of the ankle;
8. Adhesive capsulitis of the shoulder;
9. Temporomandibular joint disorders
10. Tendinopathy of the lateral epicondyle; and
11. Trigger finger
