

Video Transcript of Parker new Medical Offices Groundbreaking event

We are ready to get started.

This is a super exciting day. We are at the ground breaking. Well, ground has been broken, but we're celebrating the groundbreaking of our new Parker Medical Office buildings. This is one of three new facilities that we're working on building right now.

We'll have a number of services available at the new Parker Medical Office Building that will include primary care nurse visits, pharmacy imaging and laboratory services.

These new offices are about 30% bigger. We're going to have two thirds more exam rooms. So really not only enabling us to provide that amazing care today, but for decades to come. And as Parker grows, we want to continue to grow with Parker.

The town of Parker is currently at 67,000, on our way up to 100,000. We need health care options and access to care. Being able to get in with the provider, get your health matters taken care of. That's key. And the more you have, the more opportunities our citizens have.

Thank you to all of you. People want to reside where they have health care and good services, and without those types of services, people don't stay and people don't come. So it's very, very important to have health care and someone like Kaiser Permanente to be part of this community. Okay, here we go. One, two, three.

This is great for our patients and our members and also our care teams that take care of all these Parker patients. It'll really allow them to provide care and a world class facility, which we're really excited about.
