

Please Read: This document contains information about the drugs we cover when you participate in a Kaiser Permanente Commercial (non-Medicare) plan.

What is the Kaiser Permanente Northwest Commercial Formulary?

A formulary is a list of covered drugs chosen by a group of Kaiser Permanente physicians and pharmacists known as the Formulary and Therapeutics Committee. This committee meets regularly to evaluate and select the safest, most effective medications for our members.

What is a generic drug?

Our plan covers both brand-name drugs and generic drugs. A generic drug is approved by the FDA as having the same active ingredient as the brand-name drug. Generally, generic drugs cost less than brand-name drugs.

What is a brand-name drug?

Brand-name drugs are manufactured and sold by the pharmaceutical company that originally researched and developed the drug. When the patent on a brand-name drug expires, other pharmaceutical companies may manufacture and sell an FDA-approved generic version of the drug with the same active ingredient(s) at lower prices.

What are specialty-tier drugs?

Specialty-tier drugs are very high-cost drugs.

Kaiser Permanente Formulary

The formulary list that begins on the next page provides coverage information about some of the drugs covered by our plan.

The first column of the chart lists the drug name. Brand-name drugs are capitalized (e.g. ALBENZA) and generic drugs are listed in lower-case italics (e.g. *amoxicillin*).

The second column will indicate what tier the drug is in. Drugs on our formulary are categorized as Generic, Preferred Brand or Specialty.

The third column of the chart will indicate any requirements or limits for that drug.

PA = A drug that requires specific medical criteria be met and requires approval by the plan prior to being dispensed for benefit.

QL = A drug that has a quantity limit or is limited to a specific days supply.
